

Royal Perfection Emu Oil

Emu Oil Properties and Uses

People from around the world are discovering the benefits of Emu Oil that aborigines have used for thousands of years. Emu Oil comes from a large bird called an Emu (*Dromaius Novaehollandiae*). The Emu is a prehistoric bird thought to have roamed the outback of Australia some 80 million years ago. It is one of a number of large flightless birds called "Ratites". Aborigines used Emu Oil for muscle aches, sore joints, inflammation and swelling.

EMU OIL IS:

- Ø Non-Toxic
- Ø Anti-Bacterial
- Ø Anti-Inflammatory
- Ø Anti-Microbial
- Ø All Natural

Royal Perfection Emu Oil is an excellent moisturizer, emollient and softens the skin. Our Emu Oil contains unique penetrating qualities and goes to work where you need it most. It does not smell like a conventional rub (no aroma) so no one needs to know this natural product has been used.

NO HEAT – Royal Perfection Emu Oil does not heat the skin, it is a comfortable alternative in the summer or winter, and can be used during periods of heavy work or strenuous workouts. Open pores will not experience the burning sensation you get from other products. With literally thousands of satisfied users worldwide, Royal Perfection Emu Oil is fast becoming known as the "Medicine For The New Millennium".

Emu Oil Uses:

Many people testify that Royal Perfection Emu Oil has helped them when other products have not. We are not making any specific claims, but Royal Perfection Emu Oil has been effective in all of the following applications in some patients who have used it. Emu Oil is economical to use, 3 to 4 drops goes a long way.

Royal Perfection Emu Oil has been known to:

- Ø Relieve Arthritis Pain and Stiffness
- Ø Help REDUCE BRUISING and appearance of scars
- Ø Treat Wounds
- Ø Decrease Recovery Time From Sprains
- Ø Reduce muscle and joint aches
- Ø REDUCE ITCHING from insect bites, helps heal spider bites
- Ø Aid in healing and pain relief of bed sores
- Ø Relieve Pain From Diaper Rash

Emu Oil Overview (taken from WebMD):

The emu is a flightless bird that resembles a small ostrich. Emu oil is taken from the fat of this bird during processing. It is used to make medicine.

Emu oil is taken by mouth for improving cholesterol levels, as a source of polyunsaturated and monounsaturated fatty acids, for weight loss, and as a cough syrup for colds, H1N1 (swine) flu, and flu.

Some people apply emu oil to the skin for relief from sore muscles, aching joints, pain or inflammation, carpal tunnel syndrome, sciatica, shin splints, and gout. It is also used topically to improve healing of wounds, cuts, and burns from radiation therapy; to reduce bruises and stretch marks; to reduce scarring and keloids; to heal surgical wounds caused by removing skin for skin grafts; to reduce redness due to acne; and to soften dry cuticles and promote healthy nails. Emu oil is also used topically athlete's foot; diaper rash; canker sores; chapped lips; poor circulation; and skin conditions, including cancer, dry skin, dandruff, eczema, psoriasis, wrinkles or age spots. It is also used to protect skin from sun damage and to promote more youthful looking skin.

Emu oil is also applied to the skin to reduce pain and irritation from shingles, bedsores, hemorrhoids, diabetic nerve pain, insect bites, earaches, eye irritation, "growing pains," and frostbite. It is used for rashes, razor burn, and nicks.

Some massage therapists apply emu oil to clients' skin as part of their treatment.

Some people put emu oil inside the nose to treat colds and flu.

Emu oil (7%) is used in combination with glycolic acid (10%) for lowering blood fats including triglycerides, and low density lipoprotein (LDL) cholesterol; preventing and treating allergies; preventing scarring; treating headaches, especially migraines; preventing nosebleeds; treating and preventing cold and flu symptoms; and relieving discomfort associated with menstruation.

In veterinary practice, emu oil is used to reduce swelling in joints, prevent cracked or peeling paws, calm "hot spots," and reduce irritation of flea bites.

In manufacturing, emu oil is used to sharpen and oil industrial machinery, for polishing timber and leather, and for conditioning and waterproofing.

How does it work?

Emu oil contains chemicals called fatty acids that might reduce pain and swelling (inflammation). There is some evidence that emu oil might work better for sudden (acute) inflammation than for ongoing (chronic) inflammation.

When emu oil is applied to the skin, it has moisturizing and cosmetic properties that resemble mineral oil.
